

Bryan Gunawan

Full-stack engineer focused on scalable, user-centered web experiences. Strengths in frontend architecture, state management, and performance, with hands-on work across Next.js, React, TypeScript, Firebase, and SQL-backed systems

EXPERIENCE

Launchpad — *Tech Associate & Fullstack Developer*

September 2023 - Present

- Grew from apprenticeship to technical consultant, taking ownership of system design and delivery.
- Built full-stack apps with React, Next.js, TypeScript, Firebase, and PostgreSQL.
- Shipped real-time features, backend integrations, and AI-enhanced workflows.
- Owned frontend architecture, data flows, and reusable UI components.
- Collaborated with cross-functional teams to deliver polished features.
- Client project: cleaned and normalized multi-source datasets for Car Wash Scouter location scoring.

Bentley Systems — *Intern*

July 2024 - August 2024

- Contributed to the **Data Interactive Element Selector**, an internal 3D BIM data tool for selecting and visualizing model elements.
- Built React/TypeScript components for interactive highlighting, dynamic data manipulation, and contextual detail panels.

PROJECTS

Launchpad Studio Project — *DokiDoki Productivity Companion*

- Developed a gamified productivity app with AI companions, focus timers, goals, and achievement tracking to keep users engaged.
- Implemented Next.js + Firebase features for daily/weekly/custom goals and personalized companion feedback.
- Used analytics and feedback loops to refine onboarding and engagement.

Bentley Systems Project — *Data Interactive Element Selector*

- Interactive React + TypeScript app for selecting and visualizing 3D BIM model elements in real time.
- Built UI components for multi-select workflows, contextual detail panels, and element highlighting within complex models.
- Implemented dynamic filtering and data manipulation to make model exploration faster and more intuitive.
- Focused on performance, reliability, and UX consistency across large datasets.
